

SUSTAINABILITY PLATFORM

7 REASONS WHY?

1

REGULATIONS

There are 10's of regulations across industries, geographies, and countries. Many of them are still evolving rapidly and hard for a company to keep up

CUSTOMER FORMATS

Most companies have 100s of customers. Different customers request data from their suppliers in different formats and different frequencies. Enterprises need a scalable solution across 1000s of SKUs and 100's of customers

2

3

OPERATIONS VS. AVG. == \$\$\$

Using 1st party operational data over industry averages translate to financial benefits. These come from a price premium in the market, better operational efficiencies or reduced regulatory risks

CERTIFICATION

A digital platform allows companies to automate workflow with 3rd party certification agencies, similar to how financial systems enable auditors to certify company finances within days/weeks.

4

5

SCOPE 3 - THE HOLY GRAIL

A digital platform can provide insight into scope 3 emissions foot print by product. Many companies, today, are blind to some of their biggest contributors of emissions and unable to act it.

REPEATABLE

Current approaches, that are consultant heavy, are too expensive and inefficient to scale every quarter or every month. A digital platform provides realtime visibility in companies sustainability health

6

7

PROTECT YOUR IP

Sharing data with 3rd party can expose critical intellectual property (e.g., chemical process details) or business confidential information (e.g., supplier pricing information). A digital system can enable fine grain access control
